

Spring Planting Guide

Boise's average last frost date is May 10. This is the date where we have a 50% probability of not having any more days with below 32 degrees.

Stagger your plantings to have a multi-week harvest. Many seeds can be planted after our average last frost date (May 10) or you can start them a couple weeks early. Cucurbits (cucumbers, melons and squash) and root crops do not like their roots disturbed. It is best to plant them directly in the ground.

| Vegetable | Feb 15- Mar 20 | 20-Mar | 30-Mar | 10-Apr | 20-Apr | 30-Apr | 10-May | 20-May | 30-May | 10-Jun |
